

MetaIMDTM+

FOCUSING THE FULL POWER OF METABOLOMIC DATA

META IMD+ PROVIDES AN IN-DEPTH ANALYSIS OF THE FULL METABOLOMIC DATA SET THAT WAS COLLECTED VIA THE META IMD TEST. THIS SERVICE CAN BE VALUABLE FOR CLINICIANS SEEKING NEW INSIGHTS TOWARD DIAGNOSIS OR TREATMENT BEYOND THE CLINICALLY VALIDATED DISEASES.

Meta IMD+ is available to clinicians looking for more in-depth understanding of their pediatric patients' Meta IMD results.

What does this Service provide?

Meta IMD detects approximately 800 metabolites across diverse metabolite classes and pathways. Results are statistically compared against a reference population of 866 healthy pediatric individuals.

In addition to the results already provided as part of the Meta IMD testing, clinicians will receive a report identifying the most profound biochemical pathway disturbances. Results are also communicated to the clinician in a 30-minute phone consultation with an expert PhD-level biochemist who is highly experienced in the link between biochemistry and disease.

Key Benefits of Meta IMD+

- ✓ In depth data analysis yielding a comprehensive metabolic profile
- ✓ Evaluate underlying pathway or biomarker anomalies not measurable by other means
- ✓ Provide suggestions for confirmatory disease testing

About Metabolon

Metabolon is the world's leading health technology company advancing metabolomics for precision medicine and every area of life sciences research. Our Precision MetabolomicsTM is a powerful technology for assessing health and is delivering biomarker discoveries, innovative diagnostic tests, and ground-breaking data for genomics and population health initiatives.

Almost every factor impacting the phenotype—from genetics and the microbiome to disease and lifestyle—exerts its influence by altering metabolite levels. By producing the most accurate, comprehensive picture of the metabolome, we help answer some of biology's most challenging questions.

META IMD+

- In-depth data analysis
- Comprehensive metabolic profile
- Detect underlying pathway or biomarker anomalies
- Provide suggestions for confirmatory disease testing
- 30-minute phone consultation to discuss results
