

A Scalable Metabolomics Platform for CROs

Deliver high-value metabolomics services to drive biomarker discovery, MOA studies, multi-omics integration and translational research

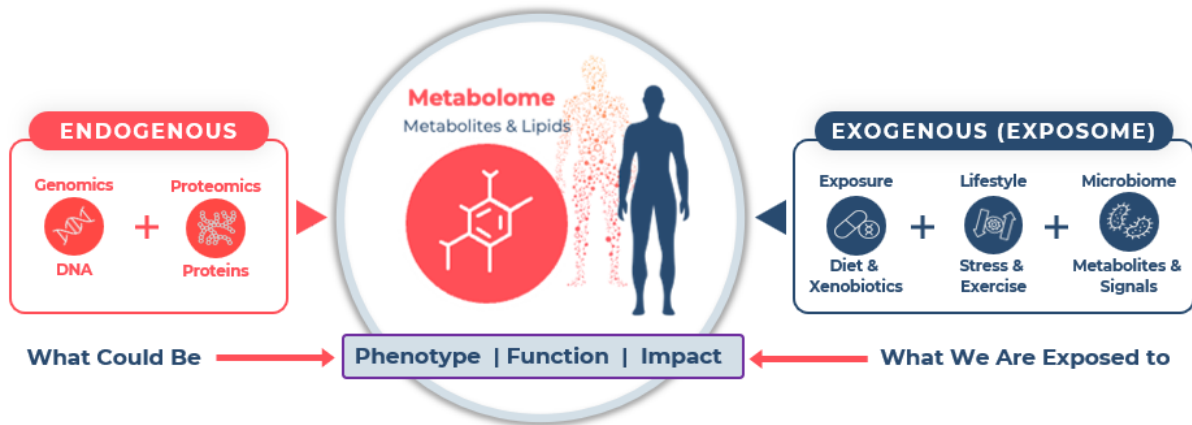

Why Metabolomics?

Metabolites are the real-time reporters of phenotype, reflecting genetic programming and environmental influences in ways that genomics and proteomics alone cannot capture. Despite this immense potential, the field of metabolomics has faced persistent challenges in scaling, including workflow complexity, reliance on unvalidated methods, and time-consuming, error-prone data processing.

The Metabolon's Verus™ Metabolomics Profiling Kit was engineered to address these limitations by delivering a streamlined and scalable end-to-end solution for metabolomics and multi-omics data integration. The Verus solution can plug into an existing CRO portfolio to drive value for project sponsors across broad applications.

Metabolomics Connects Genomics and Proteomics to Biological Outcomes

Metabolon's Tools & Expertise in Your Service Portfolio

The Metabolon Verus Metabolomics Profiling Kit encapsulates 25 years of scientific leadership and Metabolon's unwavering commitment to data quality, robustness, and biological insight. By reducing barriers to metabolomics and multi-omics integration, the Verus Kit represents Metabolon's commitment to making the most powerful layer of biology scalable for CROs to integrate seamlessly into their service portfolios, helping project sponsors accelerate discovery.
